

AI Overview

Manufacturing is the process of converting raw materials or components into finished goods, often on a large scale, using labor, machinery, tools, and chemical or biological processes, forming the core of the secondary economy and transforming basic resources into tangible products like cars, electronics, clothing, or food. It ranges from handcrafts to high-tech, involving systematic production, division of labor, and sophisticated techniques to create items for consumers or other industries, driving economic activity and innovation.
